### unit-3 & 4 sums

1. consider that the minimum and maximum values for the attribute "salary" are 12000 and 98000 respectively and the mapping range of salary is  $[0.0, 1.0]$ . Find the transformation for the salary 73600 using min-max normalization.

$$\text{minimum} = 12000$$

$$\text{maximum} = 98000$$

$$\text{range} = [0.0, 1.0]$$

$$v = 73600$$

$$v' = \frac{v - \min(A)}{\max - \min} \times (\text{new max}(A) - \text{new min}(A)) + \text{new min}$$

$$v' = \frac{73600 - 12000}{98000 - 12000} \times (1.0 - 0.0) + 0.0$$

$$v' = \frac{61600}{86000}$$

$$v' \approx 0.7163$$

Thus, the normalized salary value is approximately 0.7163

2. consider the following set of data  $x = \{15, 27, 62, 35, 39, 50, 44, 44, 22, 98\}$ . Do preprocessing using smoothing by bin means and bin boundary to smooth the data, using a bin of depth 3. Evaluate it.

$$\text{Data} = \{15, 27, 62, 35, 39, 50, 44, 44, 22, 98\}$$

$$\text{depth} = 3$$
